

# Chip & PIN Solutions for hospitality and retailing

**ICR Touchscreen EPOS systems are fully integrated with chip & PIN to provide comprehensive payment solutions at the point of sale.**

- *Faster transactions - better customer service*
- *Fixed chip & PIN terminals for retailing point of sale*
- *Wireless chip & PIN terminals for payment at the table in restaurants*
- *No time consuming end-of-day reconciliation work*

**Serve your customers faster, eliminate mistakes and avoid time consuming work at the end of the day with an ICR point of sale system that is fully integrated with chip & PIN.**

### **Quick and accurate**

With an integrated system, sales are faster and more accurate since the point of sale terminal sends the transaction directly to the chip & PIN terminal. This eliminates mistakes and delays through sales staff entering different amounts on the point of sale terminal and the chip & PIN terminal.

### **Penny perfect reconciliation**

An integrated system means that the end of day credit card figure on your EPOS will match the reading from your chip & PIN terminal. Because the till controls the credit card payments there is little opportunity for discrepancy - and therefore no time-consuming end of day work reconciling figures.

### **Retailers can operate like major supermarkets**

Integrated chip and PIN allows retailers to offer their customers the same service as the major high street chains, including faster transaction times, cash back and even contactless payments.

### **Restaurants can take payment at table**

With an integrated system, servers in restaurants can request the bill from a wireless chip and PIN terminal and take payment at the table, automatically clearing the balance from the till - faster service, less room for error. Servers spend less time walking to and from the till and more time attending to the needs of your customers.

### **You will be fully compliant within the regulations**

All our systems support and enable compliance with PCI DSS, the security standards mandated by the payment card schemes. These are being increasingly enforced with significant fines levied for non compliance.

### **Commidea support**

Commidea provides a support contract that provides next business day replacement of your chip and PIN terminal in the event of a malfunction.

### **Commidea**

Commidea is part of the Point group and a market leader in the development of credit card processing technology, providing a range of high performance systems and tailor-made solutions for almost every industry and market sector.

Commidea believes in utilising the latest technology to provide state of the art credit card payment processing solutions.

Their customers include organisations both public and private, from large high street names to independent retailers, award winning e-commerce sites and the country's leading mail order companies. Commidea is the solution for your card payment processing needs.
